

HAMMER FOR ELECTRIC WELDERS - HICKORY HANDLE

Réf.: **0430300301**

Characteristics

To remove welding slag. Forged head, induction-treated working surfaces (54 HRC). Polished working parts. Epoxy powder paint by electrostatic process, followed by baking. A red ring marks the hammer's wooden handle. Registered design. Flexible mechanical behavior, contributing notably to the force of the strikes and the absorption of vibrations. Labeling: PEFC-certified (wood from sustainably managed forests). Hickory handle: hardwood of high density, suitable for intensive or frequent use. The connection between the head and steel is made by a hydraulic machine. A stress sensor measures on each product the power of the nozzle, then a pressure sensor controls the installation of the resin. Extraordinary high performance.
